PROFESSIONAL SUMMARY

Full Stack Engineer with production experience across the complete web stack — JavaScript, TypeScript, Next.js, Node.js, PostgreSQL, and MongoDB. Shipped Billet, a production-ready job-tracker serving real users, built with tRPC, Prisma, Supabase, and Groq AI integration, including a published browser extension and full OAuth/Gmail/Calendar automation. Civil Engineering graduate with four years in field operations: multi-site logistics, compliance documentation under deadline, and precision under real-world constraints — the same discipline that now goes into database schema design, breaking-change management, and system architecture.

TECHNICAL SKILLS

Languages JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL, Bash

Frontend Next.js 15, React 18, Tailwind CSS, Responsive Design, Web Accessibility (WCAG), React Hook Form

Backend Node.js, Express.js, tRPC, RESTful API Design, Server-side Rendering, OAuth 2.0, JWT (jose), Session Pooling

Databases PostgreSQL, Supabase, MongoDB, Prisma ORM, Database Schema Design, Migrations, Indexed Foreign Keys

Testing Jest, Vitest, React Testing Library (RTL), Playwright (E2E)

State & Data TanStack Query (React Query), Zustand, Zod (schema validation), Context API

DevOps & Tooling Git, GitHub, GitHub Actions (CI/CD), Vercel, Docker (fundamentals), npm, Vite

Design Figma, Penpot, UI/UX Design, Design Systems, Component Architecture

APIs & Integrations Google OAuth 2.0, Gmail API, Google Calendar API, Groq AI (Llama 3.3 70B), Browser Extension APIs (Manifest V3)

PROJECTS

Billet github.com/KingGray034/Billet · billet-ng.vercel.app

Next.js 15 · TypeScript · tRPC · Prisma 7 · Supabase · PostgreSQL · Groq AI · Google APIs · Vercel

- Built a **production-ready** full-stack job application tracker serving real users: drag-and-drop Kanban pipeline across 6 stages, analytics dashboard, and list view — centralising tracking, AI preparation, and communication in one tool.
- Engineered custom authentication using **Google OAuth 2.0**, HTTP-only JWT sessions (jose), and Next.js route middleware, replacing insecure localStorage token storage with per-user data isolation across a multi-tenant PostgreSQL schema.
- Integrated **Groq AI (Llama 3.3 70B)** via a tRPC mutation layer to generate role-specific interview questions and perform resume-to-JD match scoring with gap analysis, keyword identification, and tailoring recommendations.
- Built and published a **Manifest V3 browser extension** (live on Firefox Add-ons, submitted to Edge) that DOM-scrapes job details from 7 major job boards (LinkedIn, Indeed, Glassdoor, ZipRecruiter, Wellfound, RemoteOK, Monster) via content scripts, saving directly to the user's pipeline via credentialed API calls — zero manual data entry.
- Implemented **Gmail OAuth** popup flow to parse and import job-related emails, and **Google Calendar OAuth** to automatically schedule interview events — automating data entry across the full application lifecycle.
- Architected the **tRPC + Prisma 7 data layer** over Supabase PostgreSQL using a session pooler connection pattern to resolve IPv6 network constraints, maintaining consistent query performance across 7 relational models with cascading deletes and indexed foreign keys.
- Configured **CI/CD** via GitHub Actions to Vercel with a prisma generate pre-build step; managed environment parity across local and production with 7 environment secrets.

PROFESSIONAL EXPERIENCE

Assistant Field Officer · Lazbru & Company Nigeria Limited · Abia State March 2021 – February 2026

Civil Engineering · Field Operations · Multi-site Logistics

- **Coordinated** logistics and resource allocation across 3+ concurrent project sites, maintaining delivery schedules and HSE compliance under real field pressure — the same discipline now applied to managing multi-environment deployments and breaking-change decisions.

- **Produced** weekly field reports and compliance records across 4+ active projects simultaneously; developed a habit of writing clearly under constraint and catching discrepancies before they became incidents.
- **Managed** real-time communication across field crews, contractors, and management on multi-site operations — where a miscommunication cost real money and time. Built an instinct for precise, unambiguous technical communication.

EDUCATION

Bachelor of Engineering — Civil Engineering · Michael Okpara University of Agriculture, Umudike May 2018 – August 2023

CERTIFICATIONS

NSQ Level 3 — Frontend Web Development · Computer Professionals Registration Council of Nigeria (CPN) Dec 2025

NSQ Level 3 — UI/UX Design · Computer Professionals Registration Council of Nigeria (CPN) Dec 2025

Backend Development · TS Academy Apr 2026

Frontend Web Dev — Skill-Lift Program · Jefapris/Webdeves · Federal Ministry of Education & World Bank Jun 2025

ADDITIONAL

Languages English (fluent) · German (basic conversational) **Interests** Open Source · Web Accessibility · UI/UX · Developer Tooling · Writing & Worldbuilding

Availability Open to full-time, contract, remote, hybrid, and on-site roles
